Curriculum Vitae

Research Interests

My research interests include virtual reality, human-computer interaction, eye tracking, and human behaviour modelling. The long-term research goal is to build an intelligent human-aware interactive system that can accurately modelling human behaviours in daily activities. During my Ph.D., I focused on the analysis and prediction of human eye gaze behaviour in virtual reality. I am now extending my research to the modelling of other human behaviours, especially human body movements in daily activities.
